Cloud Storage

UK-based secure and reliable storage
for your business critical information.

With obligations to retain ever-increasing amounts of data for longer periods and the need to provide access to data from multiple devices and locations, businesses are facing a data storage and access challenges. To help, Cloudserve provides secure cloud storage services for storing, managing and sharing any kind of business data.

FEATURES

Traditional on-premise or in-house data storage solutions require initial capital expense on hardware and software. They also require on-going costs to manage and maintain the required infrastructure. Migrating to a cloud based approach for data storage and access reduces these costs and provides significant improvements in security, availability and accessibility of key business data.

PAYG Pricing

Cloud storage is available via a pay-as-you-go pricing model with monthly fees dependent on the amount of storage required with unlimited bandwidth for access. You only pay for the data storage requirement each month.

Safe & Secure

All data resides in our secure UK-based data centres. Data does not reside on a client's local devices so it cannot be lost, stolen, nor is it subject to individual hardware failures. Automatic data backup and replication ensures your data is consistently available and protected with zero management overheads while industry standard SSL encryption protects access to your data from any device.

Suitable For All

Cloudserve cloud storage is perfect for storing and managing data of all types whether this is for day-to-day access of live company data by staff, access to archive data, or a repository for on premise backup data.

Cloud Storage

UK-based secure and reliable storage for your business critical information.

Seamless cloud storage and backup

As part of our range of cloud services, Cloudserve can provide a number of options for cloud storage dependent on requirements. These services can be utilised as standalone services or integrated into our other service offerings including hosted desktops, hosted servers etc. All services provide 100% UK data sovereignty with guaranteed service level agreement, full support and industry standard levels of security.

Hosted File Server

Get a Private Virtual Machine server instance with flexible storage allocation and connectivity mechanisms (VPN, WebDav, FTP, phone app, etc.). This is a fully bespoke storage solution for your business.

Cloud Drive

This is our secure, UK-based, fully private Dropbox alternative. It features an enterprise-grade store, share and synchronisation service, providing Dropbox-like functionality but fully private, UK-based storage with full support included.

Cloud Backup

Use our secure online backup service for all your business and application data. Backup your on-premise data with our enterprise-grade online backup solution, featuring a simple per user per month pricing policy.

Features

- Pay-as-you-go pricing
- Seamless integration
- Instant scalability
- Access anywhere, any time
- Support for all file formats
- Advance security
- Permission management
- Streamlined sharing & linking
