Hosted Servers

Replace your on-premise servers with our reliable, fully supported and UK-based infrastructure.

Migrate or extend your on-premise servers to Cloudserve's ISO27001, UK data centre Infrastructure as a Service solution ("IaaS"). Hosted servers can be deployed with a wide variety of operating system and tailored to run almost any workload including websites, databases, applications, data storage and much more.

Cloudserve hosted servers run on a secure Microsoft Hyper V based infrastructure utilising Dell PowerEdge Servers controlled and monitored by Microsoft System Centre. Clients can choose from a "hands-off" fully managed service to self-service via Cloudserve's Azure Pack control panel.

Existing on-premise infrastructure can be seamlessly integrated in a "Hybrid Cloud" approach providing additional resources to existing solutions as and when required.

FEATURES

Fully Scalable

Add and remove server instances or scale CPU and RAM storage up and down as requirements change. Only pay for the resources you need and benefit from the flexibility to amend your service whenever you need.

Fast & Responsive

Latest generation Dell PowerEdge servers with a range of storage tiers from dedicated SSD, tiered SSD-HDD and HDD provide the performance you need for your workload.

It's Economical

Avoid the upfront and management costs associated with on-premise servers and benefit from 'pay as used' pricing but maintain the performance and capacity your workloads require.
