## Cloud Backup

Fully backup and protect your business from system failures and unexpected technical issues.

Cloud Backup provides a highly secure, automated method of protecting your critical business data, whether it's simple file data or more complex data such as SQL, Exchange or full PC\server backups. It offers a cost effective, hassle-free alternative to tape or disk based backup solutions. Traditional backup methods can be very effective, but are time intensive to manage, require capital expense on backup equipment and software and often let businesses down when data needs to be restored.

### FEATURES

#### Cost Effective

Compression and de-duplication minimise the amount of data to be transferred and stored keeping costs down. Simple low cost monthly fees based on the amount data that is protected.

#### Easy & Automatic

After installing the backup software and selecting the data that needs to be protected Cloudserve takes care of the rest. Daily automatic backups will then occur with status reports sent as required. No need to swap tapes, disk or take backup media off site. Adding and/or amending the backup regime is easy via the control panel and a summary view of all devices being protected is provided giving you peace of mind your data is protected.

#### Safe & Secure

Your backups are stored in highly secure data centres, in a monitored storage environment, with redundant power and connectivity. All backups are encrypted and data can only be read with the appropriate encryption key.

## Cloud Backup

Fully backup and protect your business from system failures and unexpected technical issues.

### Protect your data and reduce costs

Conventional backup methods have many drawbacks – they are often unreliable, require resource to manage, maintain and monitor and can be costly, complex and difficult to operate successfully. Most importantly they often fail to provide the ability to restore data in a timely manner in the hour of need. Managed online or cloud backup is increasingly becoming the standard for data protection. It removes the burden and risk of self-operated backup regimes, leaving you free to concentrate on growth with peace of mind that your data is protected.

#### For businesses of all sizes

Businesses both large and small are realising the benefits of secure online backup providing the re-assurance that your important data is safe. Online Backup helps businesses avoid revenue loss and downtime while enabling them to resume operations quickly and cost effectively following a disaster or unplanned interruption.

#### Great support as standard

We recognise the importance of great customer support, which is why Cloudserve provides help and guidance whenever you need it. Our UK-based support team is on hand by phone, email or live chat to ensure your back software runs smoothly. Your queries will always be dealt with by the same team, encouraging continuity of support and greater understanding of your business and its needs.

### Features

- Very easy to manage
- Cost effective
- Fast backup and restore
- Protect all systems and data
- Industry-leading software
- Highly secure
- 24/7 monitoring & support
- Full UK-based support
