Hosted Desktop

Access your desktop from anywhere, whenever you need it, on any device. Simple as that.

Hosted desktop technology is today's preferred method of delivering a Microsoft Windows desktop environment to staff. Part of the 'cloud computing' concept, a hosted desktop looks and acts exactly like a traditional Windows PC but, instead of software, applications, and data relying and running on your on-premise IT infrastructure, they are located and run in Cloudserve's state-of-the-art data centres. Hosted desktops offer numerous advantages in terms of cost savings, security, resilience, flexibility and reduced management.

FEATURES

Access Anywhere

Wherever you are and whatever device you use you can connect to your hosted desktop. Our platform allows you secure access from any location you wish, which means that you can join colleagues as if you were in the office. Flexibility is a quality that can pay dividends internally too. Many businesses are now increasing productivity and gaining valuable loyalty by providing flexible working arrangements.

It's Economical

Rather than investing in depreciating assets, which require high capital expenditure initially and then continue to be a drain on your resources, choosing hosted desktops means you no longer have to invest in PC infrastructure or office applications. Instead, a transparent per-user subscription model ensures predictable costs and great value for money.

Easily Expand

Supporting additional staff is simple. Additional hosted desktops can be fully deployed to new staff with 24 hours and accessible from any connection device with a user name and password. Simple monthly per-user billing supports flexibility in staff numbers. Additional storage, applications and resources are easy to deploy.

Hosted Desktop

Access your desktop from anywhere, whenever you need it, on any device. Simple as that.

Free yourself from desktop management

Hosted desktops remove the burden of managing individual desktop environments in-house, leaving you to concentrate on growing your business and maximising turnover. Information is stored in our highly secure data centre and delivered to you via any Internet browser, so your own, fully customisable desktop, can be accessed wherever you are, whenever you want. It is exactly the same as using a PC - simply plug into your broadband connection and you're ready to go. Work with Cloudserve to drive your off-premise strategy and efficiently reduce costs without giving up control.

No IT experience necessary

Hosted desktops are easy to use and deploy. We take care of things so you don't have to. With this type of infrastructure there's no longer any need to worry about patching or administering your desktops, application compatibility or upgrades, or about which vendor's technology is most suited to your needs – we do all of that for you.

Never upgrade

Technology is advancing at such a speed that PCs and software are typically becoming obsolete as quickly as 12 months after purchase as they struggle to cope with the growing demands placed on them. Being part of our infrastructure means you can access the most powerful systems and latest software available.

Features

- MS Windows 8 environment
- Microsoft Office 2013
- Easy printing to any printer
- Install your own apps
- Full virtual machine desktop
- Connect from any device
- Scale from 1 to 1000+ users

Benefits

- Accessible anywhere
- Lower cost than in-house
- Hassle free
- Minimal administration
- Safe, secure and resilient
- 24/7 support provided
- Available on-demand
